

USER MANUAL

DPS Pro for Magento 1

Online Version

An online version of this user manual can be found [here](#).

Quick Links

This User Manual is structured in the following sections:

[Install + Set Up \(User Manual\)](#)

2

Install + Set Up (User Manual)

New Settings

The following setting groups are added under **System > Configuration > Sales > Payment Services**:

- [General Settings](#) (including Maxmind fraud)

The following setting groups are added under **System > Configuration > Sales > Payment Methods**:

- [DPS PxPost by MageBase](#)
- [DPS Webservice by Fooman \(3D Secure Enabled\)](#)
- [DPS PxPay by MageBase](#)
- [DPS PxFusion by Fooman](#)
- [DPS PxPost/PxPay \(Billing Agreements\) by Fooman](#)
- [DPS Webservice \(Billing Agreements\) by Fooman](#)

We indicate which features are available on which version of Fooman Payment Express (DPS) Pro in the following way: (v1.0.0+).

New Order Statuses

The following new order statuses are added to fit your order workflow:

- **Pending Payment (DPS):** use when order has been created and the customer is redirected to Payment Express to complete payment – indicates that the customer chose Payment Express as their payment method and still need to complete the transaction
- **Processing (DPS – Amount Authorised):** use when also using the “Authorise Only” action for Payment Express payments – indicates that an order has been placed with Payment Express and you have selected the “Authorise and Capture” option
- **Processing (DPS – Amount Paid):** use once order payment is received payment via Payment Express – indicates that order is ready for shipment

Using 'Authorise and Capture'

There are two choices when accepting credit card payments:

- **'Purchase'** – the transfer of funds will be processed immediately after the customer completes payment
- **'Authorise and Capture'** – two step process where a hold is put on the funds after the customer completes payment, and the transfer of the funds is later completed in Payment Express (outside of Magento).

2. Configure General Settings (including Maxmind Fraud)

Click on **System > Configuration > Sales > Payment Services**.

Fooman DPS Pro		
Maxmind Key	VdXdyqdNGowJ	[GLOBAL]
Number of queries left	10702 ▲ How many queries you have left for the current month.	[GLOBAL]
Maxmind Value Threshold	0 ▲ Enable fraud checking for baskets above this value (base currency).	[GLOBAL]
Maxmind Fraud Threshold	5 ▲ 0-100 (probability that this order is fraudulent)	[GLOBAL]
Hide Methods	No ▲ Hide payment methods when fraud has been detected	[GLOBAL]
Maxmind Hide Threshold	0 ▲ 0-100 (probability that this order is fraudulent)	[GLOBAL]
Enable automatic purging of expired billing agreements	Yes ▲ Enable/Disable cron job.	[GLOBAL]
Start Time of cron job	0 : 0 : 0 ▲ When should the cleaning run.	[GLOBAL]

Maxmind Key (v1.0.0+)

Enter your Maxmind key.

Number of Queries Left (v1.0.0+)

Displays how many Maxmind queries you have left for the current month.

Maxmind Value Threshold (v1.0.0+)

Enable Maxmind fraud checking for orders over this amount (in your store's base currency). For example, you might set this value to \$20 due to the cost of running the fraud check.

Maxmind Fraud Threshold (v1.0.0+)

Enter a value between 0 and 100 for the Maxmind 'fraud threshold' – the Maxmind fraud value over which you consider the order to be a fraud risk so will assign a [Suspected Fraud] order status.

Hide Methods (v1.0.0+)

Set to “Yes” to automatically hide Payment Express as a payment method if the specified Maxmind hide threshold (below) is exceeded. This will prevent an order from being placed.

Maxmind Hide Threshold (v1.0.0+)

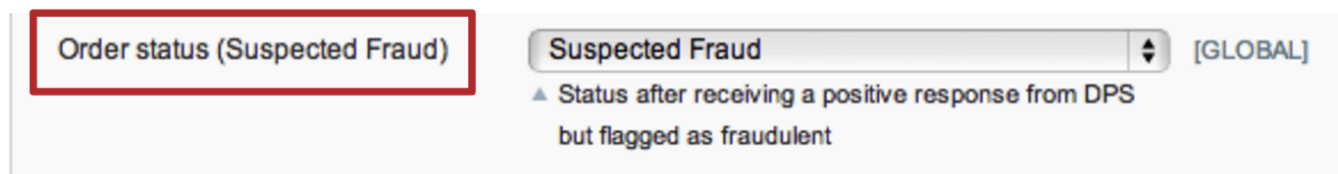

Enter a value between 0 and 100 for the Maxmind 'hide threshold' – the Maxmind fraud value over which you want to hide Payment Express as a payment method.

Enable Automatic Purging of Expired Billing Agreements (v1.1.0+)

When set to “Yes”, any expired credit cards (from tokenised billing using the [DPS PxPost/PxPay \(Billing Agreements\)](#) or [DPS Webservice \(Billing Agreements\)](#) settings) will be deleted. This process will run automatically each day at the time you specify (below).

Start Time of Cron Job (v1.1.0+)

Choose what time you want to run the daily automatic purging of expired billing agreements. This uses system resources, so it's better to have the process run at quieter times/overnight.

Order Status (Suspected Fraud) (v1.0.0+)

Select the status to assign to new orders which exceed the specified Maxmind fraud threshold (above). All options with the status code [Payment Review] under **System > Configuration > Order Statuses** will be included in the dropdown list.

Select “Suspected Fraud” to require an order to be manually reviewed (rather than automatically accepted). After completing due diligence to investigate the identified risk and consult the customer history (if any), you can decide whether to accept or reject the order.

When your chosen Maxmind Fraud Threshold has been exceeded, two new buttons appear on the order view page of the individual order - “Accept Payment” and “Deny Payment”:

All transactions marked as suspected fraud will be authorised only. If you use the “Deny Payment” button (above) or if no action is taken, the authorisation will hold for up to 30 days (depending on the banks involved) and then lapse.

If you use the “Accept Payment” button (above), this will automatically trigger capturing the amount marked for authorisation to complete the transaction payment. An invoice will also be automatically created.

Maxmind offers the following advice for setting fraud and hide thresholds:

“There is no single recommended set of riskScore values to use for deciding whether to accept, reject, manually review, or submit transactions to complementary services for analysis. In determining what thresholds to set, you should consider the costs of chargebacks and lost goods, the cost of manual review, the cost of complementary services, and the cost of potentially rejecting good orders.

A recommended strategy is to at first only automatically accept orders under a low riskScore (e.g. 3.00), only automatically reject orders above a high riskScore (e.g. 70.00), and manually review all other transactions. After monitoring the riskScores received for the manually reviewed transactions, you can adjust the thresholds appropriately to reduce the amount of manual review required.

Below is the distribution of riskScores returned by the minFraud service across all users. You can use this data to estimate the number of orders that will be approved, rejected, or held back for review given the thresholds you set. Please note that the distribution of riskScores you observe may differ.”

<i>RiskScore Range</i>	<i>% of Orders in Range</i>
<i>0.10-4.99</i>	<i>90%</i>
<i>5.00-9.99</i>	<i>5%</i>
<i>10.00-29.99</i>	<i>3%</i>
<i>30.00-99.99</i>	<i>2%</i>

Maxmind Fraud Scores

Maxmind fraud scores are displayed in each order, under “Payment Information”. Summary information is displayed by default. Click on the arrow to expand the fraud score details.

Example Order: Below the Specified Fraud Threshold (Maxmind Risk Score – 0.10)

3. DPS PxPost by MageBase Settings

Click on **System > Configuration > Sales > Payment Methods**.

These settings apply if you want to use your PxPost account to:

- Accept payments in Magento (fill out all fields in this section); and/or
- Use the process refunds from the Magento backend or tokenised billing features of this extension (you only need to enter your PxPost username and password – all other fields in this section do not need to be filled out).

Enabled (v1.0.0+)

Set to “Yes” to enable using your PxPost account to accept payments in Magento.

Set to “No” if you just want to use the process refunds from the Magento backend and/or tokenised billing features of this extension. You only need to enter your PxPost username and password – all other fields in this section do not need to be filled out.

Use in Frontend Checkout (v1.1.0+)

Set to “Yes” to enable PxPost to be displayed as a payment method in the frontend checkout. If set to “No”, PxPost will not be shown to a customer in the frontend during checkout, but the payment method will be available to you in the backend (eg. for backend orders).

Title (v1.0.0+)

Enter the title of the payment option that will be displayed to the customer (eg. “Secure Credit Card Payment”).

Credit Card Types (v1.0.0+)

Control-click to select which credit card types you want to accept using PxPost.

PostUsername		[STORE VIEW]
PostPassword		[STORE VIEW]
Payment Action	Purchase	[WEBSITE]
New order status	Processing	[WEBSITE]

▲ Displayed during checkout.

Post Username (v1.0.0+)

Enter your PxPost username (as supplied by Payment Express).

Post Password (v1.0.0+)

Enter your PxPost password (as supplied by Payment Express).

Payment Action (v1.0.0+)

Select a payment action when an order is placed:

- Authorize Only (note: you will need to complete the transaction at a later stage – see [Using 'Authorise and Capture'](#) for details)
- Purchase

New Order Status (v1.0.0+)

Select the status to assign to new orders. All options with the status code [Processing] under System > Configuration > Order Statuses will be included in the dropdown list.

Logos to Display (v1.0.0+)

Control-click to select which credit card logos you want to appear on the payment page at checkout. The Payment Express logo is always displayed by default.

Further customisations can be done by editing the template file

[WEBSITE]

[WEBSITE]

[WEBSITE]

[WEBSITE]

Payment from Applicable Countries (v1.0.0+)

Allow payment from:

- All allowed countries (specified under System > Configuration > General)
- Specific countries (specify below)

Payment from Specific Countries (v1.0.0+)

If you chose “specific countries” above, control-click to select all countries you wish to allow payments from.

Use Maxmind Fraud Detection (v1.0.0+)

Select “Yes” to enable Maxmind fraud detection when using PxPost as a payment method. You need to have a Maxmind account to use this feature.

Minimum Order Total (v1.0.0+)

Enter a minimum order total that must be reached for this payment method to be displayed at checkout. Do not enter any currency symbols (amount will be in the store's base currency).

Maximum Order Total (v1.0.0+)

Enter a maximum order total that must not be exceeded for this payment method to be displayed at checkout. Do not enter any currency symbols (amount will be in the store's base currency).

Leave blank if you do not want to specify a maximum order total amount.

Sort Order (v1.0.0+)

This setting allows you to adjust the order of where different payment methods appear at checkout (where multiple methods are available).

Payment methods will be ordered according to the assigned number - for example, enter 1 for the payment method you wish to appear first, 2 for the payment method you wish to appear next, and so on.

Enable Logging/Debug (v1.0.0+)

If any issues are encountered with this extension or using Payment Express as a Magento payment method, set to “yes” to create additional logging information to help identify the issue:

- Log files created under /var/log
- Entries in the database table magebasedps_debug

4. DPS Webservice by Fooman (3D Secure Enabled) Settings

Click on **System > Configuration > Sales > Payment Methods**.

These settings apply if you want to use your Payment Express Webservice account to accept payments in Magento, with optional use of the 3D Secure feature.

Ignore the “3D Secure Credit Card Validation” settings under System > Configuration > Sales > Payment Services. These apply only to Magento's inbuilt Centinel service.

DPS Webservice by Fooman (3D Secure enabled)		
Enabled	Yes	[WEBSITE]
Use in Frontend Checkout	Yes	[WEBSITE]

Password		[STORE VIEW]

Enabled (v1.0.0+)

Set to “Yes” to enable using your Payment Express Webservice account to accept payments in Magento.

Use in Frontend Checkout (v1.1.0+)

Set to “Yes” to enable Webservice to be displayed as a payment method in the frontend checkout. If set to “No”, Webservice will not be shown to a customer in the frontend during checkout, but the payment method will be available to you in the backend (eg. for backend orders).

Title (v1.0.0+)

Enter the title of the payment option that will be displayed to the customer (eg. Secure Credit Card Payment”).

Credit Card Types (v1.0.0+)

Control-click to select which credit cards you want to accept using this payment method.

Username (v1.0.0+)

Enter your Payment Express Webservice username.

Password (v1.0.0+)

Enter your Payment Express Webservice password.

Use Maxmind Fraud Detection	No	[WEBSITE]
Enable 3D Secure	Yes	

Use Maxmind Fraud Detection (v1.0.0+)

Select “Yes” to enable Maxmind fraud detection when using Payment Express Webservice as a payment method. You need to have a Maxmind account to use this feature.

Enable 3D Secure (v1.0.0+)

Set to “Yes” to enable the [3D Secure security feature](#). When set to “No”, the Payment Express Webservice will be used as a payment method without the 3D security feature.

3D Secure uses the Verified by Visa and MasterCard SecureCode schemes. If a customer has set up a password on their credit card, they are required to enter the password (along with their credit card number and expiry date) to submit the payment. The password will be authenticated against their bank as part of the checkout process. Once the customer's bank has verified the password, the transaction will be completed.

Test Mode (v1.0.0+)

If you have been given a Payment Express test account, set to “Yes” to enable test mode.

5. DPS PxPay by MageBase Settings

Click on **System > Configuration > Sales > Payment Methods**.

These settings apply if you want to use your PxPay account to accept payments in Magento.

Note: It's not possible to use PxPay's feature to retry a failed credit card entry - only the fail-proof notification from Payment Express is processed by the extension and the response from the client's browser is ignored. The Payment Express transaction response is sent immediately when a credit card payment fails (even if a customer retries the payment). Currently there is no way to accurately distinguish between a real payment failure and a payment failure which might be rectified by the customer in the future.

Payment from Applicable Countries (v1.0.0+)

Allow payment from:

- All allowed countries (specified under System > Configuration > General)

- Specific countries (specify below)

Payment from Specific Countries (v1.0.0+)

If you chose “specific countries” above, control-click to select all countries you wish to allow payments from.

Use Maxmind Fraud Detection (v1.0.0+)

Select “Yes” to enable Maxmind fraud detection when using PxPay as a payment method. You need to have a Maxmind account to use this feature.

Minimum Order Total (v1.0.0+)

Enter a minimum order total that must be reached for this payment method to be displayed at checkout. PxPay cannot be used with a minimum order value of 0.00 – the minimum value should be at least 0.01. The amount will be in the store's base currency (don't enter any currency symbols).

Maximum Order Total (v1.0.0+)

Enter a maximum order total that must not be exceeded for this payment method to be displayed at checkout. Do not enter any currency symbols (amount will be in the store's base currency).

Leave blank if you do not want to specify a maximum order total amount.

Sort Order (v1.0.0+)

This setting allows you to adjust the order of where different payment methods appear at checkout (where multiple methods are available). Payment methods will be ordered according to the assigned number - for example, enter 1 for the payment method you wish to appear first, 2 for the payment method you wish to appear next, and so on.

Emails to Send on Order (v1.0.0+)

Select which emails will be sent to the customer when an order is placed using this payment method.

Note: The master settings under **System > Configuration > Sales > Sales Emails** still apply and can override this setting. If you don't want to send customer emails, turn this feature off under **System > Configuration > Sales > Sales Emails** (but make sure this setting is enabled if you do want to send emails!).

Add Manual Payments to Footer
Links

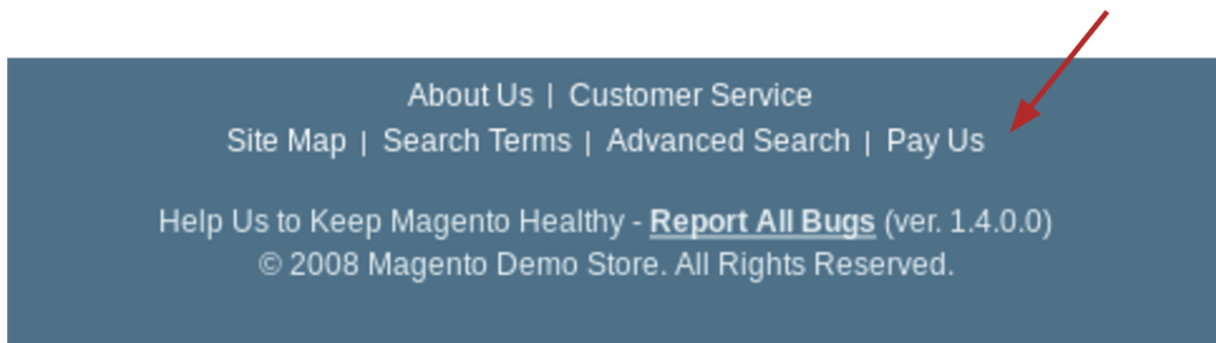

No

[STORE VIEW]

Add Manual Payments to Footer Links (v1.0.0+)

When set to “Yes”, a “Pay Us” link will be added to your store's footer. Use this link to accept manual payments for money owed not related to orders for items in your store (eg. ad-hoc work). You need to refresh the Magento cache for this setting to take effect.

This links to a “Make a Payment” page, where the customer can enter their reference number and the amount to pay. You can also give customers the direct link to the page (with pre-filled reference number and payment amount) using the following format:

<http://example.com/foomandpspro/payment/start/reference/REFERENCE/amount/12.34>

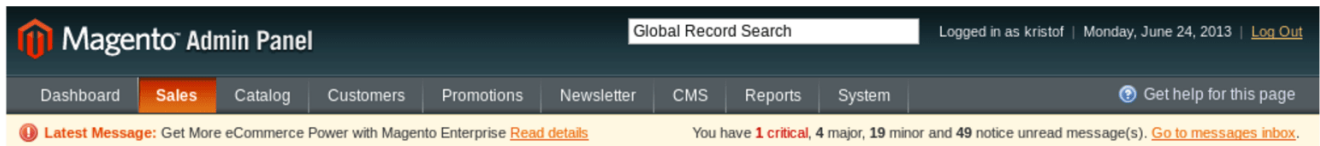

A screenshot of the 'Make a Payment' form. The form has a light blue header with the title 'Make a Payment'. Below the header is a yellow box containing two input fields. The first field is labeled 'Reference *' and contains the value 'INV-11223344'. The second field is labeled 'Amount *' and contains the value '127.43'.

The customer will then be redirected to the Payment Express website to complete the payment. Once the payment has been made, they will be redirected back to your website to a “Payment Received” screen.

A screenshot of the 'Payment Received' screen. The screen has a light blue header with the title 'Payment Received'. Below the header is a yellow box containing a table with payment details.

Reference	INV-11223344
Amount	127.43
Card Type	Visa
Card Holder	TESTER

Manual payments you receive will be shown in Magento under Sales > DPS Manual Payments (only manual payments without an order affiliation will be listed on this page):

The screenshot shows the top of the Magento Admin Panel. It includes the Magento logo, the text 'Admin Panel', a 'Global Record Search' bar, and user information: 'Logged in as kristof | Monday, June 24, 2013 | Log Out'. Below this is a navigation bar with tabs for Dashboard, Sales (highlighted), Catalog, Customers, Promotions, Newsletter, CMS, Reports, and System. A message bar at the bottom of the navigation bar states: 'Latest Message: Get More eCommerce Power with Magento Enterprise Read details' and 'You have 1 critical, 4 major, 19 minor and 49 notice unread message(s). Go to messages inbox.'

[WEBSITE]

Send Manual Payment Received Email To (v1.0.0+)

Use this feature to automatically send a notification email if your store receives manual payments. The dropdown list is populated from your Magento contacts list.

Manual Payment Received Template (v1.0.0+)

Select a template for the 'Manual Payment Received' email. The default template is 'New Payment Received' - this can be edited under System > Transactional Emails.

Enable Logging/Debug (v1.0.0+)

If any issues are encountered with this extension or using Payment Express as a Magento payment method, set to "yes" to create additional logging information to help identify the issue:

- Log files created under /var/log
- Entries in the database table magebasedps_debug

Enable Functionality for Local Testing (v1.0.0+)

Set to “Yes” to treat a browser visit to the order success page as a replacement for the DPS fail-proof payment notification – use only during testing if not connected to the internet.

We recommend setting this to “No” in a live environment (if customer does not return to the checkout success page, Magento has no way of knowing if a payment has been successful). Please double check with Payment Express that fail-proof notifications are enabled for your account.

6. DPS PxFusion Settings

Click on **System > Configuration > Sales > Payment Methods**.

These settings apply if you want to use your PxFusion account to accept payments in Magento.

DPS PxFusion by Fooman

- Purchase

Unpaid Order Status (v1.1.20+)

Select the status to assign to unpaid orders. All options with the status code [Pending Payment] under **System > Configuration > Order Statuses** will be included in the dropdown list.

New Order Status (v1.1.20+)

Select the status to assign to new orders. All options with the status code [Processing] under **System > Configuration > Order Statuses** will be included in the dropdown list.

Logos to Display (v1.0.0+)

Control-click to select which credit card logos you want to appear on the payment page at checkout. The Payment Express logo is always displayed by default.

Further customisations can be done by editing the template file

/app/design/frontend/base/default/template/magebase/dps/pxpay/form.phtml

▲ Log all request and responses to the database

Payment from Applicable Countries (v1.1.20+)

Allow payment from:

- All allowed countries (specified under **System > Configuration > General**)
- Specific countries (specify below)

Payment from Specific Countries (v1.1.20+)

If you chose “specific countries” above, control-click to select all countries you wish to allow payments from.

Use Maxmind Fraud Detection (v1.1.20+)

Select “Yes” to enable Maxmind fraud detection when using PxPost as a payment method. You need to have a Maxmind account to use this feature.

Minimum Order Total (v1.1.20+)

Enter a minimum order total that must be reached for this payment method to be displayed at checkout. Do not enter any currency symbols (amount will be in the store's base currency).

Maximum Order Total (v1.1.20+)

Enter a maximum order total that must not be exceeded for this payment method to be displayed at checkout. Do not enter any currency symbols (amount will be in the store's base currency). Leave blank if you do not want to specify a maximum order total amount.

Sort Order (v1.1.20)

This setting allows you to adjust the order of where different payment methods appear at checkout (where multiple methods are available).

Payment methods will be ordered according to the assigned number - for example, enter 1 for the payment method you wish to appear first, 2 for the payment method you wish to appear next, and so on.

Enable Logging/Debug (v1.1.20+)

If any issues are encountered with this extension or using Payment Express as a Magento payment method, set to “yes” to create additional logging information to help identify the issue:

- Log files created under /var/log
- Entries in the database table magebasedps_debug

7. DPS PxPost/PxPay (Billing Agreements) Settings (for Tokenised Billing)

Click on **System > Configuration > Sales > Payment Methods**.

These settings apply if you want to set up tokenised billing with your PxPay or PxPost account.

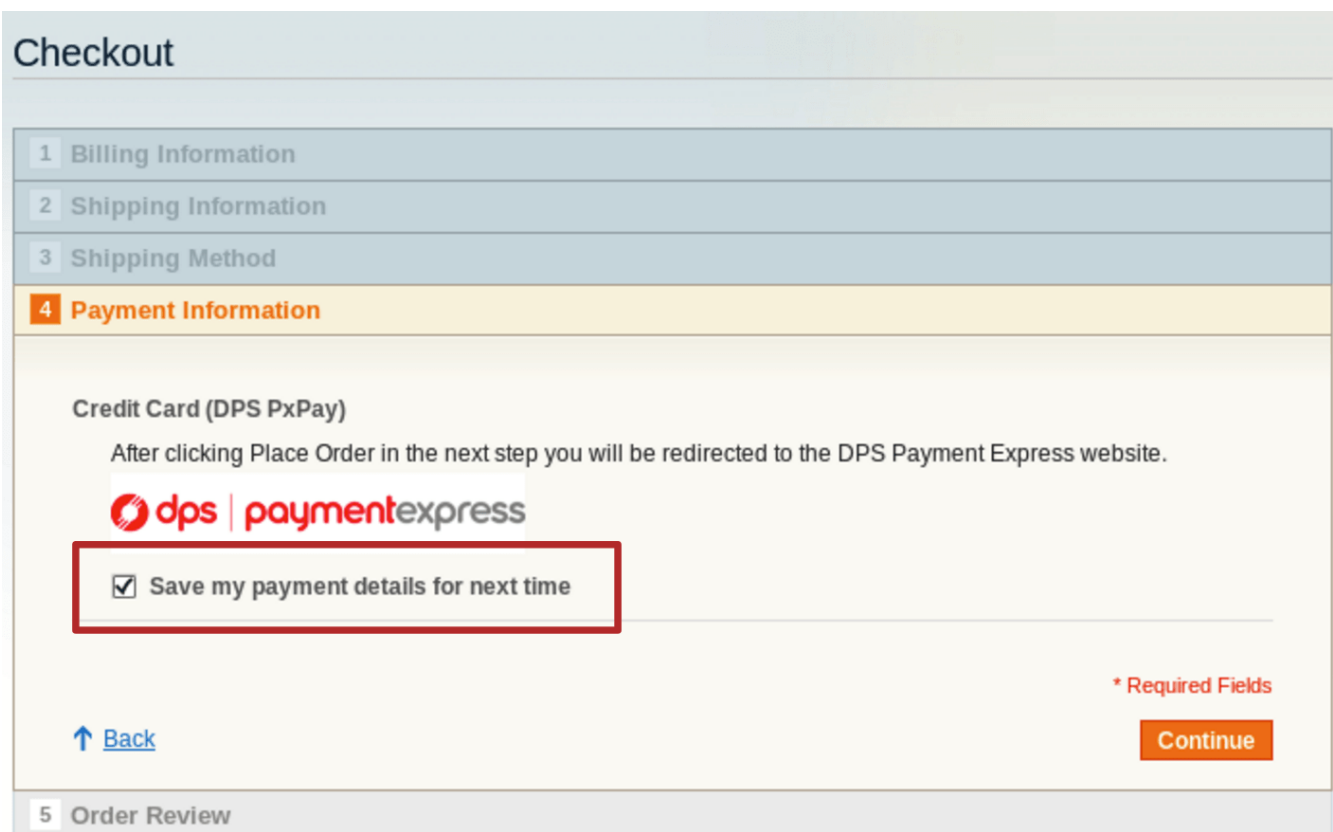

DPS PxPost/PxPay (Billing Agreements) by Fooman

☒ Enabled Yes [WEBSITE]

Enabled (v1.0.0+)

Set to “Yes” to enable tokenised billing using either the PxPost/PxPay account that you enabled in the previous settings.

Token billing allows logged in customers to tick a box if they would like to securely store their credit card information for their next purchase on your site. Only an encrypted token of the card data is saved, never the the actual credit card data.

Credit Card (DPS PxPay)

After clicking Place Order in the next step you will be redirected to the DPS Payment Express website.

dps | paymentexpress

☒ Save my payment details for next time

* Required Fields

[↑ Back](#) [Continue](#)

If they tick this box, Magento will save a 'billing agreement' and the same credit card can then

be billed for a future purchase on the same site when the customer is logged in. The next time the customer makes a purchase on your site, a new payment option will appear with their saved credit card.

The initial payment can be made onsite or offsite (using PxPost or PxPay). Subsequent payments using tokenised billing with same saved card will always be made onsite, as the saved card information will be visible as a new payment method, and credit card information doesn't need to be re-entered.

Title	Credit Card (DPS PxPost/PxPay Rebill)	[STORE VIEW]

Payment methods will be ordered according to the assigned number. For example, enter 1 for the payment method you wish to appear first, 2 for the payment method you wish to appear next, and so on.

Processing Refunds (PxPost)

The option to process Payment Express refunds directly from your Magento backend will appear automatically once you enter your PxPost account credentials in the backend settings. To process a refund:

1. Click into the order that you want to refund. Click on “Invoices” in the left column, and click into the invoice for that order.

2. Click the orange “Credit Memo” button in the top right corner.

3. Click the orange “Refund” button in the bottom left corner of the credit memo (do not click “Refund Offline”).

Understanding The Payment Workflow: Onsite vs Offsite Payment Methods

Onsite Payment Methods

Onsite payment methods include PxPost and Webservice. Customers enter their credit card details directly on your website during checkout.

1. Customer selects DPS PxPost or Webservice (3D Secure) as payment method, and enters credit card details directly on your website

1 Billing Information
2 Shipping Information
3 Shipping Method
4 Payment Information
5 Order Review

Credit Card (DPS PxPost)
Name on Card *

Credit Card Type *

Credit Card Number *

Expiration Date *

Card Verification Number *

[What is this?](#)

2. Customer places order on your website
3. Magento checkout confirmation page (after successful payment)

Order is set to “NEW ORDER” status and the order will automatically be invoiced.

Offsite Payment Methods

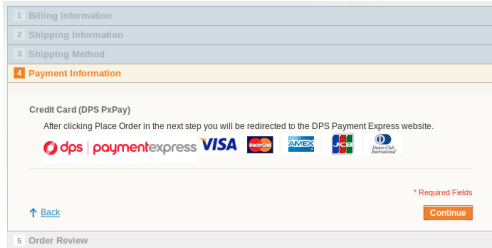

Offsite payment methods include PxPay. The approach is less integrated than an onsite

payment solution, but is more secure as your store never handles credit card data directly.

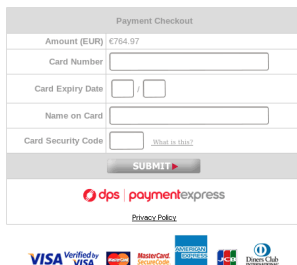

1. Customer places order on your website

Order is set to “UNPAID ORDER” status.

2. Customer selects DPS (PxPay) as payment method on your website

3. Customer is redirected to Payment Express website to enter credit card details

4. Customer is redirected back to your website to the Magento checkout confirmation page (after successful payment)

Order moves to “NEW ORDER” status and the order will automatically be invoiced.

Do I need to install the community Magebase DPS Payment Express extension separately?

No. The extensions are bundled together, so Magebase DPS Payment Express will be automatically installed when you install Fooman DPS Pro.

Reporting Any Issues/Bugs

We are proud of our quality extension code - it's been widely tested and we stand by it 100%. If something does happen and you think you might be experiencing an issue or bug, please contact us via support@fooman.co.nz and we will help you out.
