

Flexible Navigation Menu for Magento 1

Online Version

An online version of this user manual can be found [here](#).

Quick Links

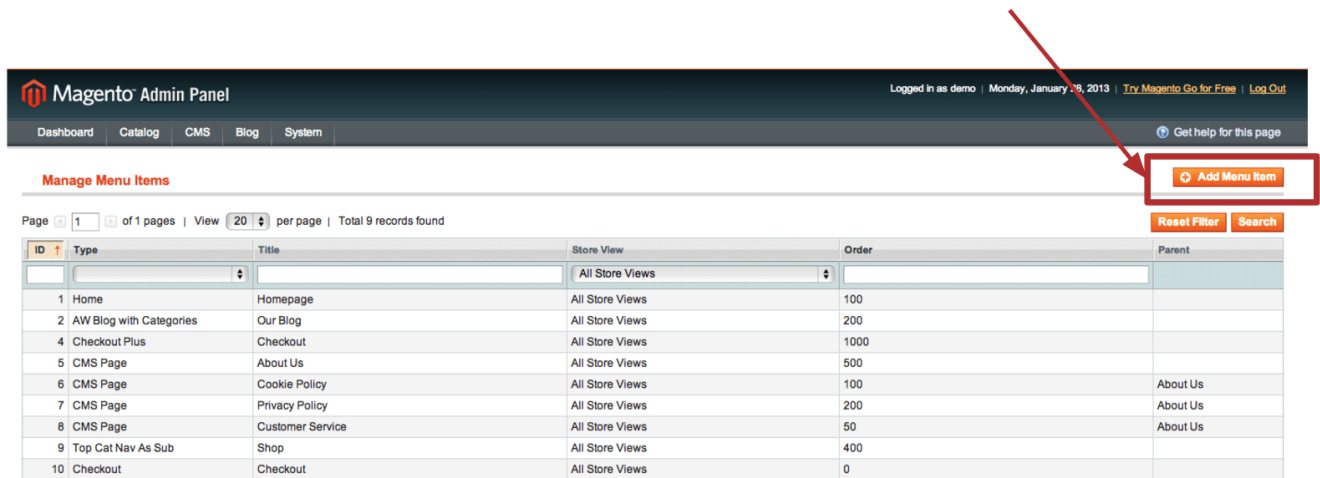

This User Manual is structured in the following sections:

[Install + Set Up \(User Manual\)](#)

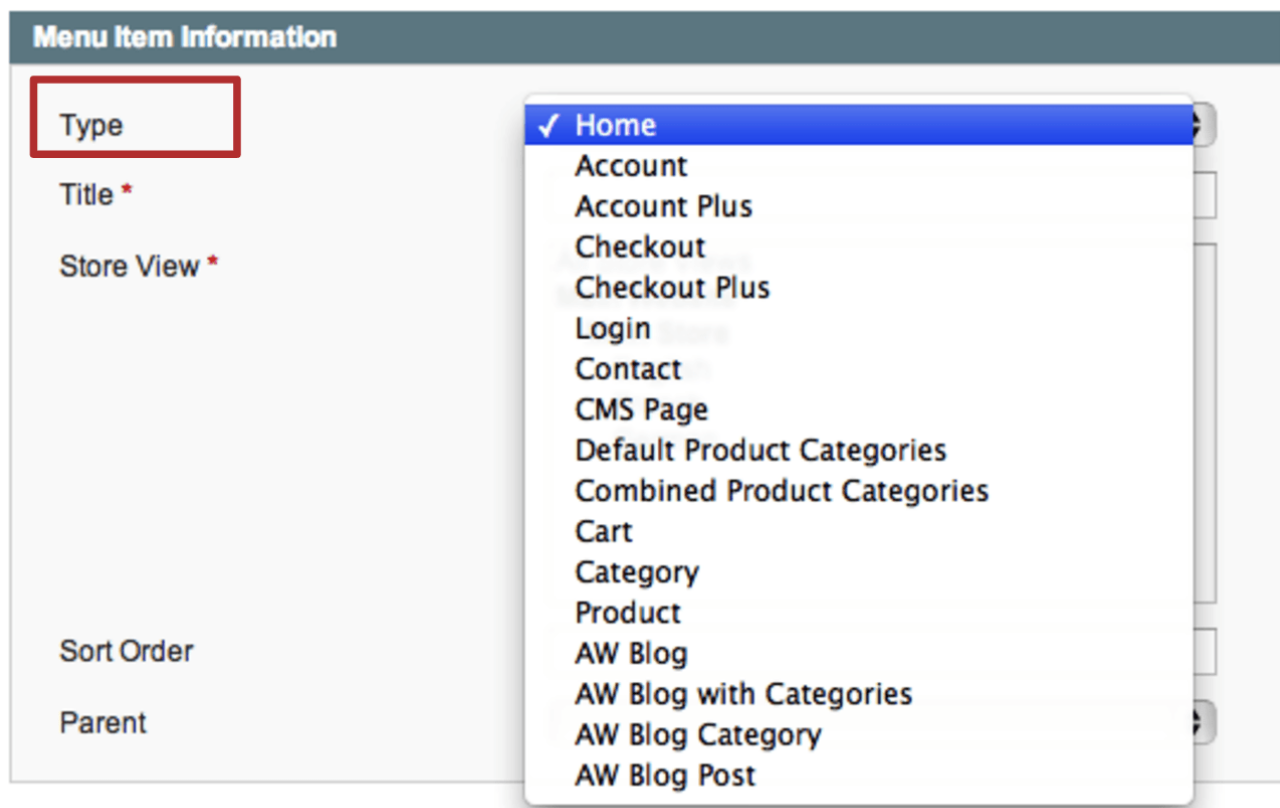

2

Install + Set Up (User Manual)

On the “Manage Menu Items” screen, click the “Add Menu Item” button.

This will bring up the following screen to create the new menu item. The settings are explained below.

Type (v1.0.0+)

Select the menu item type you want to create. Choose from the following:

Home

Adds a homepage menu item.

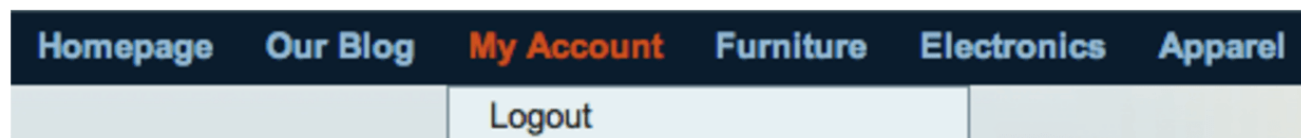

Account

Adds a customer account page menu item.

Account Plus

Adds a customer account page menu item, with “log out” drop down box when a logged in customer hovers over the menu item.

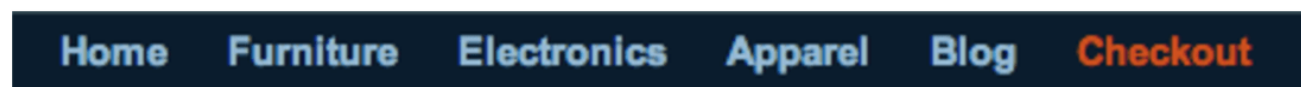

Checkout

Adds a checkout page menu item which is always visible in navigation bar, regardless of whether a customer has added anything to their cart.

Checkout Plus

Adds a checkout page menu item, which is only visible in navigation bar when customer has added an item to their cart.

Login

Adds a login page menu item. If a customer is already logged in, this will change to “Logout”.

Contact

Adds a contact page menu item.

CMS Page

Adds a CMS page in your store as a menu item, with optional use of parent headings for a fold out menu for subcategory pages.

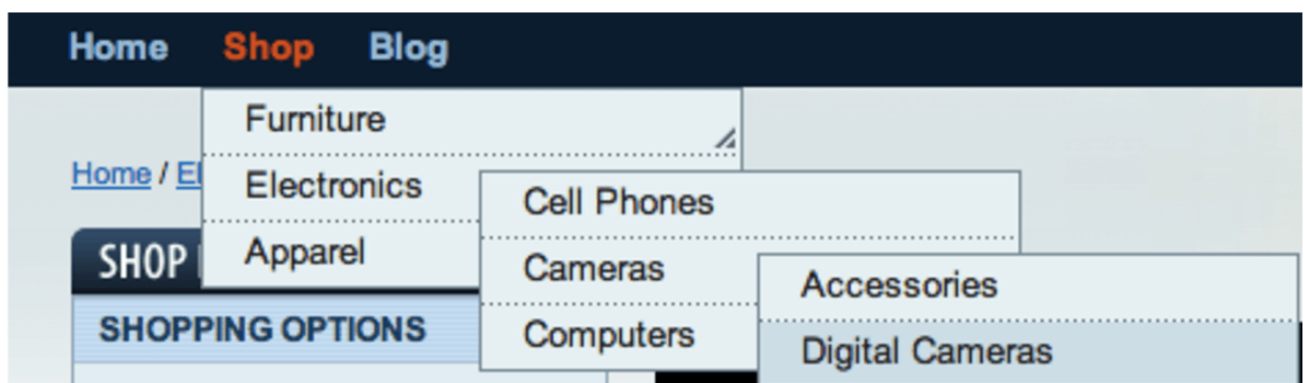

Default Product Categories

Adds all default product categories (standard Magento category tree) as menu items, with a dropdown box to display subcategories. This is the standard Magento navigation menu – the difference is that you can slot the categories in between other menu items.

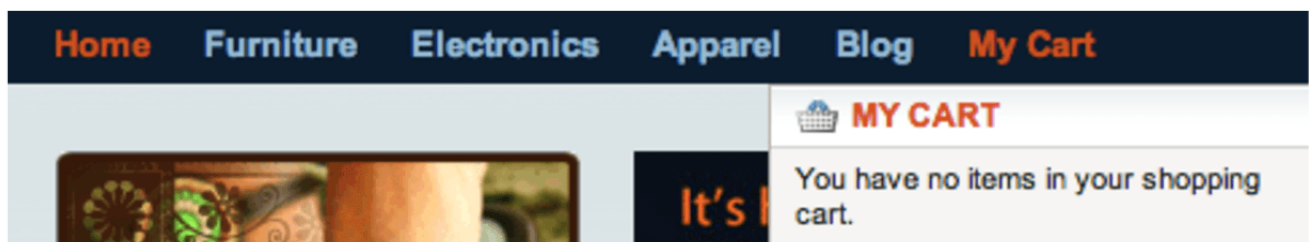

Combined Product Categories

Adds all product categories in your store under a user-friendly parent heading of your choice (eg. “Shop” or “Browse”). Individual product categories will display as a drop down/fold out menu .

Cart

Adds a shopping cart menu item, with a drop down mini cart when a customer hovers over the menu item.

Category

Adds an individual product category menu item/s (multiple product categories can be displayed as separate menu items).

Product

Adds an individual product menu item/s (multiple products can be displayed as separate menu items).

AW Blog

Adds the main page of your store's Aheadworks blog (if installed) as a menu item.

AW Blog with Categories

Adds the main page of your store's Aheadworks blog as a menu item, with a drop down menu with all blog categories.

AW Blog Category

Adds a category of your store's Aheadworks blog as a menu item (multiple categories can be displayed as separate menu items).

AW Blog Post

Adds an individual blog post of your store's Aheadworks blog as a menu item (multiple posts can be displayed as separate menu items).

Set up in the Magento backend (Step 2)

Menu Item Information

Type: CMS Page

Title *: Our Blog

Store View *: All Store Views
Main Website
Main Store
English
French
German

Sort Order:

CMS Page: About Us

Parent:

Title (1.0.0+)

Enter the name of your menu item, to be displayed on the top navigation menu.

You can't change the title for the Cart, Login and Categories menu item types – but you can enter a title for your own purpose. This won't be shown on the navigation menu.

Store View (1.0.0+)

Select which store(s) you wish to apply the new menu setting to. If you're running a multi store setup, use this setting to differentiate menu items for individual stores.

Sort Order (1.0.0+)

Adjust the order of menu items. Menu items will be ordered according to the assigned number – eg. enter 1 for the item you want to appear first, 2 for the item you want to appear second, and so on.

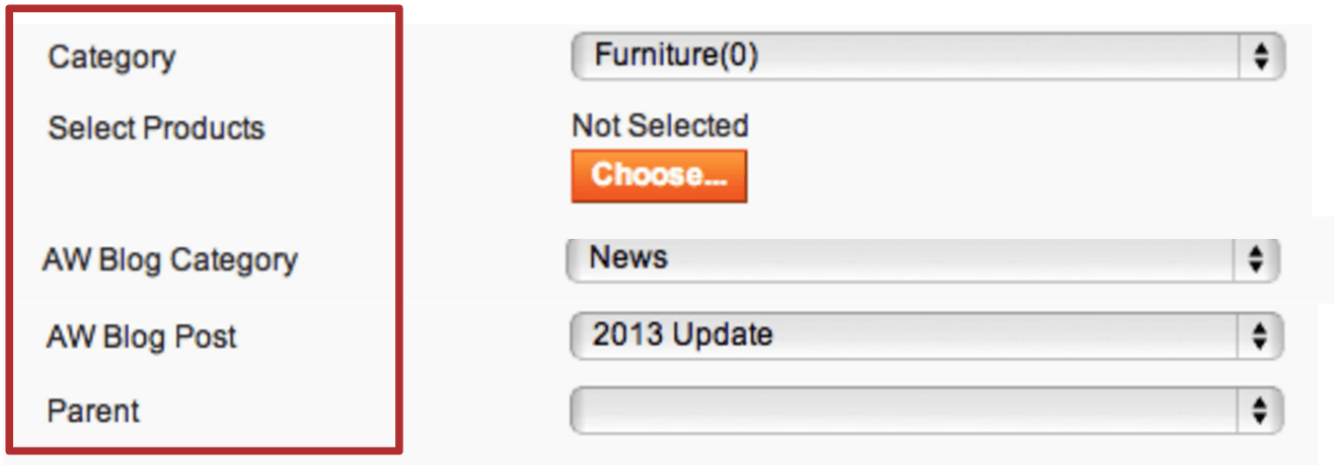

CMS Page (1.0.0+)

Choose which page you want to use for your menu item (only appears if the CMS Page

menu item type is selected). A dropdown menu will be automatically populated with your store data.

Parent (1.0.0+)

If you want this item to appear as a sub-item of an existing menu item, select the parent item here.

Category (1.0.0+)

Choose which category you want to use for your menu item (only appears if the Category menu item type is selected). A dropdown menu will be automatically populated with your store data.

Select Products (1.0.0+)

Choose which product you want to use for your menu item (only appears if the Product menu item type is selected). A select tool will be automatically populated with your store data.

AW Blog Category (1.0.0+)

Choose which category you want to use for your menu item (only appears if the AW Blog Category menu item type is selected). A dropdown menu will be automatically populated with your blog categories.

AW Blog Post (1.0.0+)

Choose which post you want to use for your menu item (only appears if the AW Blog Post menu item type is selected). A dropdown menu will be automatically populated with your blog posts.

Parent (1.0.0+)

If you want this item to appear as a sub-item of an existing menu item, select the parent item here.

Style the hover cart

The hover cart uses the same styling as the default checkout sidebar block (.block-cart).

Reporting Any Issues/Bugs

We are proud of our quality extension code - it's been widely tested and we stand by it 100%. If something does happen and you think you might be experiencing an issue or bug, please contact us via support@fooman.co.nz and we will help you out.
