

Order Number Customiser for Magento 2

Note: These instructions apply to installing an extension downloaded from the Fooman website only. If you downloaded the extension from the Magento Marketplace, follow [these installation instructions](#) instead.

Option 1: Preferred Installation Method (Fooman-Hosted Repository)

Fooman will host your extension and will automatically push new extension updates to your repository, ready for you to pull/update in the future.

The advantages of this approach are:

- Saves time installing
- Saves time on installing future extension updates (you don't need to manually download these from the Fooman website and repeat the installation process each time)
- Helps to avoid common errors some people make when using the manual installation method
- It integrates better with a multi-stage deployment process

New extension updates will be pushed automatically to this repository for as long as your support/update period is valid.

1. Log into your account on the [Fooman website](#), using your login details you signed up with. On your [My Extensions](#) page you will see a custom command line. Copy the command line:

Magento 2 Extension Installation

Command for setting up Fooman Hosted Installation Method

example.com

Copy and paste the below command and run it from your Magento 2 root directory as the first step of your installation process (all lines are part of the same command):

```
composer config repositories.fooan composer https://customer-repos.fooan.co.nz/example.com-440cc27e232e6490a6ab27d1565928358a40bb9d
```

[VIEW](#)

[COPY](#)

2. From a command line in your Magento root folder run

1. [The custom command line you copied from your Fooman Account dashboard]
2. `composer require fooman/ordernumbercustomiser-m2:^6.0`
3. `bin/magento module:enable --clear-static-content Fooman_OrderNumberCustomiser`
4. `bin/magento setup:upgrade`

If you are using Production Mode please also run

5. `bin/magento setup:static-content:deploy`
6. `bin/magento setup:di:compile`

In the above example, line 1 would look like this:

1. `composer config repositories.fooman composer https://customer-repos.fooman.co.nz/www.example.com-1a5a588b88a32a6826080639160f153214628055`

Option 2: Manual Installation Method (Self-Hosted Repository)

1. Unzip the zip file you downloaded from our store into the following folder (please create this folder if it's not already present):

MAGENTO_ROOT/vendor/fooman/packages

▼	vendor	28 items	Folder	Mar 2
▶	bin	10 items	Folder	Dec 6 2015
▶	braintree	1 item	Folder	Dec 6 2015
▶	composer	10 items	Folder	Dec 6 2015
▶	doctrine	1 item	Folder	Dec 6 2015
▶	fabpot	2 items	Folder	Dec 6 2015
▼	fooman	1 item	Folder	21:20
▼	packages	3 items	Folder	21:20
	Fooman_OrderNumberCustomiser.zip	62.9 kB	Archive	Feb 22

2. From a command line in your Magento root folder run

1. `composer config repositories.foomanartifact artifact $(pwd)/vendor/fooman/packages`
2. `composer require fooman/ordernumbercustomiser-m2:^6.0`
3. `bin/magento module:enable --clear-static-content Fooman_OrderNumberCustomiser`
4. `bin/magento setup:upgrade`

If you are using Production Mode please also run

5. `bin/magento setup:static-content:deploy`
6. `bin/magento setup:di:compile`

Uninstall Order Number Customiser (M2)

From a command line in the Magento root folder run:

```
bin/magento module:disable Fooman_OrderNumberCustomiser  
bin/magento setup:upgrade  
composer remove --update-with-  
dependencies fooman/ordernumbercustomiser-m2
```

If you have used the Manual Installation Method (Option 2), then please delete the following files if they exist.

```
rm vendor/fooman/packages/Fooman_OrderNumberCustomiser*.zip
```

Errors when updating magento 2.1.10 to 2.2.1 via composer

Composer highlights that the currently installed version of Order Number Customiser would not be compatible with the version of Magento that you are trying to install. To prevent potential breakage Composer presents this message instead.

You will need at least Order Number Customiser 4.1.0 for Magento 2.2.

If you are still in your support period for the extension the below sequence of commands will update the extension at the same time as the upgrade to Magento:

```
composer require magento/product-community-edition 2.2.1--no-update<br>composer require fooman/ordernumbercustomiser-m2:^5.0--no-update<br>composer update
```

Please note that if you previously downloaded the zip file you would need to log in again on our website to obtain the latest version.

Reporting Any Issues/Bugs

We are proud of our quality extension code - it's been widely tested and we stand by it 100%. If something does happen and you think you might be experiencing an issue or bug, please contact us via support@fooman.co.nz and we will help you out.
